

INTERCHANGEABLE TOOL HEADS

ABSTRACT OF THE DISCLOSURE

A system for treating a work surface including a handle portion, a first tool head adapted for use with a removable pad and a second tool head, both connectable to the handle portion, and a first fluid reservoir is disclosed. In some arrangements, the second tool head can be used with a removable pad or can include an electric motor. A controller can be provided for releasing and stopping fluid flow from the first fluid reservoir. An optional second fluid reservoir can also be used. The first tool head and the first fluid reservoir can include a first indicium that can be characterized by a feature such as color, shape, picture, text, or sound. The indicium can signify a work surface, a purpose for surface treatment, a mode of operation or instructions. Surface treatments include applying, cleaning, scrubbing, waxing, polishing, disinfecting, killing mites, killing fleas, detoxifying, neutralizing allergens, painting, removing liquids, and fertilizing.
